

Corrigendum to

“A Lagrangian analysis of the dynamical and thermodynamic drivers of large-scale Greenland melt events during 1979–2017” published in *Weather Clim. Dynam.*, 1, 497–518, 2020

The original Supplement to the abovementioned paper accidentally used an old version of Tables S1 to S3. The tables included wrong numbers for the minimum and maximum melt extent of the melt events listed, and the header of column six should have been named *maximum* instead of *average* T2M@ME. Nevertheless, all the remaining results about the melt events (total number, date, duration, etc.) are listed correctly in the current version. Also, the flawed tables were not used for the abovementioned paper, and the results in Table 2 of the paper are based on the correct version of the Tables S1 to S3. Therefore, the corrigendum here does not affect the paper in any way, but it lists the supplementary details of the melt events (changes made affect header of column six, as well as the listed maximum and minimum melt extent of each melt event) correctly.
