

Interactive comment on “The importance of model resolution on simulated precipitation in Europe – from global to regional model” by Gustav Strandberg and Petter Lind

Martin Singh (Editor)

martin.singh@monash.edu

Received and published: 14 October 2020

The manuscript has now received two solicited reviews and a short comment, and the interactive discussion period is closed. The reviews are encouraging, but they all note a few shortcomings of the methods that should be addressed in a revised submission. In particular, the authors should address concerns relating to their comparison of precipitation distributions in models with different grid spacing and the appropriateness of the observational dataset used.

I encourage the authors to submit a revised manuscript that satisfactorily addresses all comments.
