

Note on HMCR system in wcd-2022-12

To whom it may concern,

During the course of copyediting the manuscript, it was discovered that HMCR was unintentionally left out of Table 1 even though it appears in Figures 5 and 10.

The following very minor changes were made to the manuscript to fix this mistake:

Changes to Manuscript

An entry for HMCR has been added to Table 1 with the following information:

<i>HMCR</i>	<i>RUMS</i>	<i>1985-2010</i>	<i>10</i>	<i>61</i>	<i>5 hPa</i>
-------------	-------------	------------------	-----------	-----------	--------------

A footnote beneath Table 1 was added that explains why HMCR is not a core system:

“HMCR is not considered a core system since there are no data available for 10 hPa.”

“In total, we consider eight systems with high-top models and seven systems with low-top models (see Table 1)” was changed to *“In total, we consider eight systems with high-top models and eight systems with low-top models (see Table 1)”*

(page 4, Sect. 2.2)

These changes do not affect any of the results or conclusions of the paper.
